## **DETAILED ACTION**

This application is a Rule 371 continuation of PCT Serial Number PCT/US03/27306, which claims the benefit of the filing date of provisional U.S. Application 60/407,376.

Claims 1-18, 25, 27-29, 35, 37, 39, 40, 47 and 48 have been canceled.

New claim 49 has been added.

Claims 19-24, 26, 30-34, 36, 38, 41-46, and 49 are currently pending.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

1. Claims 19-24, 26, 30-33 and 49 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter that was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Factors to be considered in determining whether undue experimentation is required are summarized in *Ex parte Forman*, 230 USPQ 546 (BPAI 1986). They include the nature of the invention, the state of the prior art, the relative skill of those in the art, the amount of direction or guidance disclosed in the specification, the presence or absence of working examples, the predictability or unpredictability of the art, the breadth of the claims, and the quantity of experimentation which would be required in order to practice the invention as claimed.

Claim 19 is not enabled because there does not appear to be a coenzyme/cosubstrate provided in step b) of the claim. In addition, the claim appears circular in that step c)(i) calls for the measurement of NADH production while step i) of the claim calls for the transfer of an electron from NADH to NAD<sup>+</sup> for the detection. It is not seen how the artisan could measure the same activity by measuring both the production of NADH and NAD<sup>+</sup> in opposition to one another.

This ground of rejection may be overcome by clearly restating the relationship of the different measurements to one another.

***Conclusion***

2. Claims 34, 36, 38, 41-46 are allowed.
3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
